Product Fact Sheet

April 8, 2019

Product Overview

Wanngi is a mobile web app that provides individuals with the ability to manage and take control of their health information. By allowing members to create their own personal health record, track symptoms and injuries, and manage meaningful fitness goals through wearables, Wanngi empowers consumers to live a healthier and more informed life.

With Wanngi, people are connected to all of their personal health information, and can effectively communicate it to their coach, doctor or trainer.

Wanngi's unique integration of services will reduce risk, improve general health, and ultimately save lives.

Core Features

Personal Health Record

Wanngi members are able to create their own personal health record. Wanngi will enable people to record their visits to Health Practitioners, and keep track of medications, allergies, immunizations and tests.

Symptom and Injury Management

Using Wanngi's Personal Health Service, members are able to track symptoms and injuries, note the nature of symptoms (severity, duration, time and date, context) and visually represent this on a timeline. This enables them to easily relay detailed information about their symptoms and injuries to their doctor, trainer or coach.

View Fitness Data

Wanngi seamlessly integrates with Fitbit, Garmin, Strava and Google Fit, allowing members to view and track their fitness data within one app. This data is viewable both as a list and visually.

Goal Setting

Once they connect to a fitness device, members can create their very own fitness goals directly inside Wanngi, and track their progress. Daily and weekly goals are available.

Services

Wanngi currently offers five services.

- Personal Health (Symptom & Injury Management) - a personal health record to record visits to health practitioners, and keep track of medications, allergies, immunizations and tests. Includes the ability to view, manage and track symptoms and injuries
